

◆ ENDING NOTES ◆

And now, you know how to make perfume. Whether you're recreating your favorite designer perfume or making your own original fragrance, you are a perfumer!

This book isn't actually that long. For one thing, it's for beginners, so I didn't go into anything technical or hard-core (like traditional "notes" blending or "accords.") But it's also because there's not that much to making perfume.

Yes, I know that there are books and books written on perfuming theory - I've even read some of them - but you're still just taking some good-smelling stuff, diluting it with some other stuff, and putting it in a bottle (or tin.)

Plenty of beginners with no experience have learned to do it, and you can too.

How To Make Popular Bath and Body Products

What follows this perfume book is my Popular Bath and Body book. "How To Make Popular Bath and Body Products" teaches you how to scent lotion, shower gel, scrub, and a number of other daily use products with your favorite fragrances.

Like the perfume book, the bath and body book is intended for beginners. It's really easy! You don't have to make everything from scratch. Instead, you customize unscented product bases with your own fragrance and ingredients.

The bases I recommend are made with natural ingredients for this exact purpose. Many hotels, spas, and independent sellers use this method because it always gives good results.

The beauty of this method is that you can whip up your own lotions and shower gel for layering. This is very useful if your favorite designer fragrance doesn't come in other products. You can read more about it on my website:
